Data Ethics Starter

Data Has People Behind It

- A spreadsheet can describe real people, habits, risks, and opportunities.
- Treat personal data with respect even when the data looks ordinary.
- Ask whether collecting the data is necessary before asking how to collect it.

Consent And Purpose

- People should understand what data is collected and why.
- Do not reuse data for a new purpose without checking permission.
- Keep privacy settings clear and easy to find.

Data Ethics Starter

Bias

- Data can reflect unfair systems, missing voices, or old assumptions.
- Check whose data is included and whose data is missing.
- A fair system needs testing, feedback, and willingness to change.

Reflection

- Write one benefit and one risk for a data feature.
- Name the person who could be harmed if the feature is wrong.
- Decide what data should be deleted after it is no longer needed.
