Gentle Coding Basics

What Code Does

- Code is a set of instructions that a computer follows exactly.
- Most bugs happen because the instruction is incomplete, in the wrong order, or using unexpected data.
- Learning code is learning how to describe your idea clearly.

Files And Folders

- HTML gives structure, CSS gives style, and JavaScript gives behavior.
- Keep related files named clearly so future you can find them quickly.
- A small project is easier to improve when each file has one main job.

Gentle Coding Basics

Debugging Calmly

- Read the error message from top to bottom.
- Check the file name and line number before changing many things.
- Make one change, test it, and keep notes when you learn something.

Mini Project

- Build a page with a title, one card, and one button.
- Make the button change the card text.
- Then add a second button that resets the card.
