Original sample content for app testing.

Accessibility Pocket Guide

Readable Text

- Use enough contrast between text and background.
- Avoid making important text too small.
- Keep line length comfortable so readers do not lose their place.

Controls

- Buttons should look clickable and say what they do.
- Inputs need visible labels, not only placeholder text.
- Keyboard users should be able to reach every important action.

Accessibility Pocket Guide

Layout

- Group related items close together.
- Do not rely on color alone to explain meaning.
- Check small screens because cramped layouts create avoidable mistakes.

Fast Check

- Zoom the page to 200 percent and see if it still works.
- Use Tab to move through the interface.
- Ask whether a new user can understand the first action in five seconds.
