## Source Quality

- A useful source has an author, a date, a publisher, and a reason to trust it.
- Official documentation, academic institutions, public libraries, and open education projects are strong starting points.
- A source can be interesting without being reliable enough for your assignment.

## Research Log

- Save the title, link, author, date accessed, and one sentence about why the source matters.
- Separate facts from opinions in your notes.
- Mark questions that still need another source.

## Compare Before Using

- Check whether two independent sources agree.
- Look for the original report instead of only reading summaries.
- Be careful with copied PDFs that do not show permission or license information.

## Workbook Task

- Find three sources for one topic.
- Write one claim supported by each source.
- Choose the strongest source and explain why it is strongest.
